

MAIL ATTACH CRM

**Developed by
Global Business and Technology
Solutions**

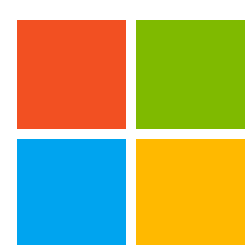

You work hard enough, so you want to save time with everyday mundane tasks.

The app we have for you today will save you time from saving your email attachments into a folder. Not only that, it will also organize it and you can save the file into your cloud drive. Our app will autorun this for you every time, so you don't have to worry.

What is more important, you never have to spend hours looking for the attachment sent to you from your friend or client a few months ago or even a few years back. Your email attachments have been safely saved and organized for you, in your cloud drive and you can access this from anywhere. We call this app **Mailattach CRM**

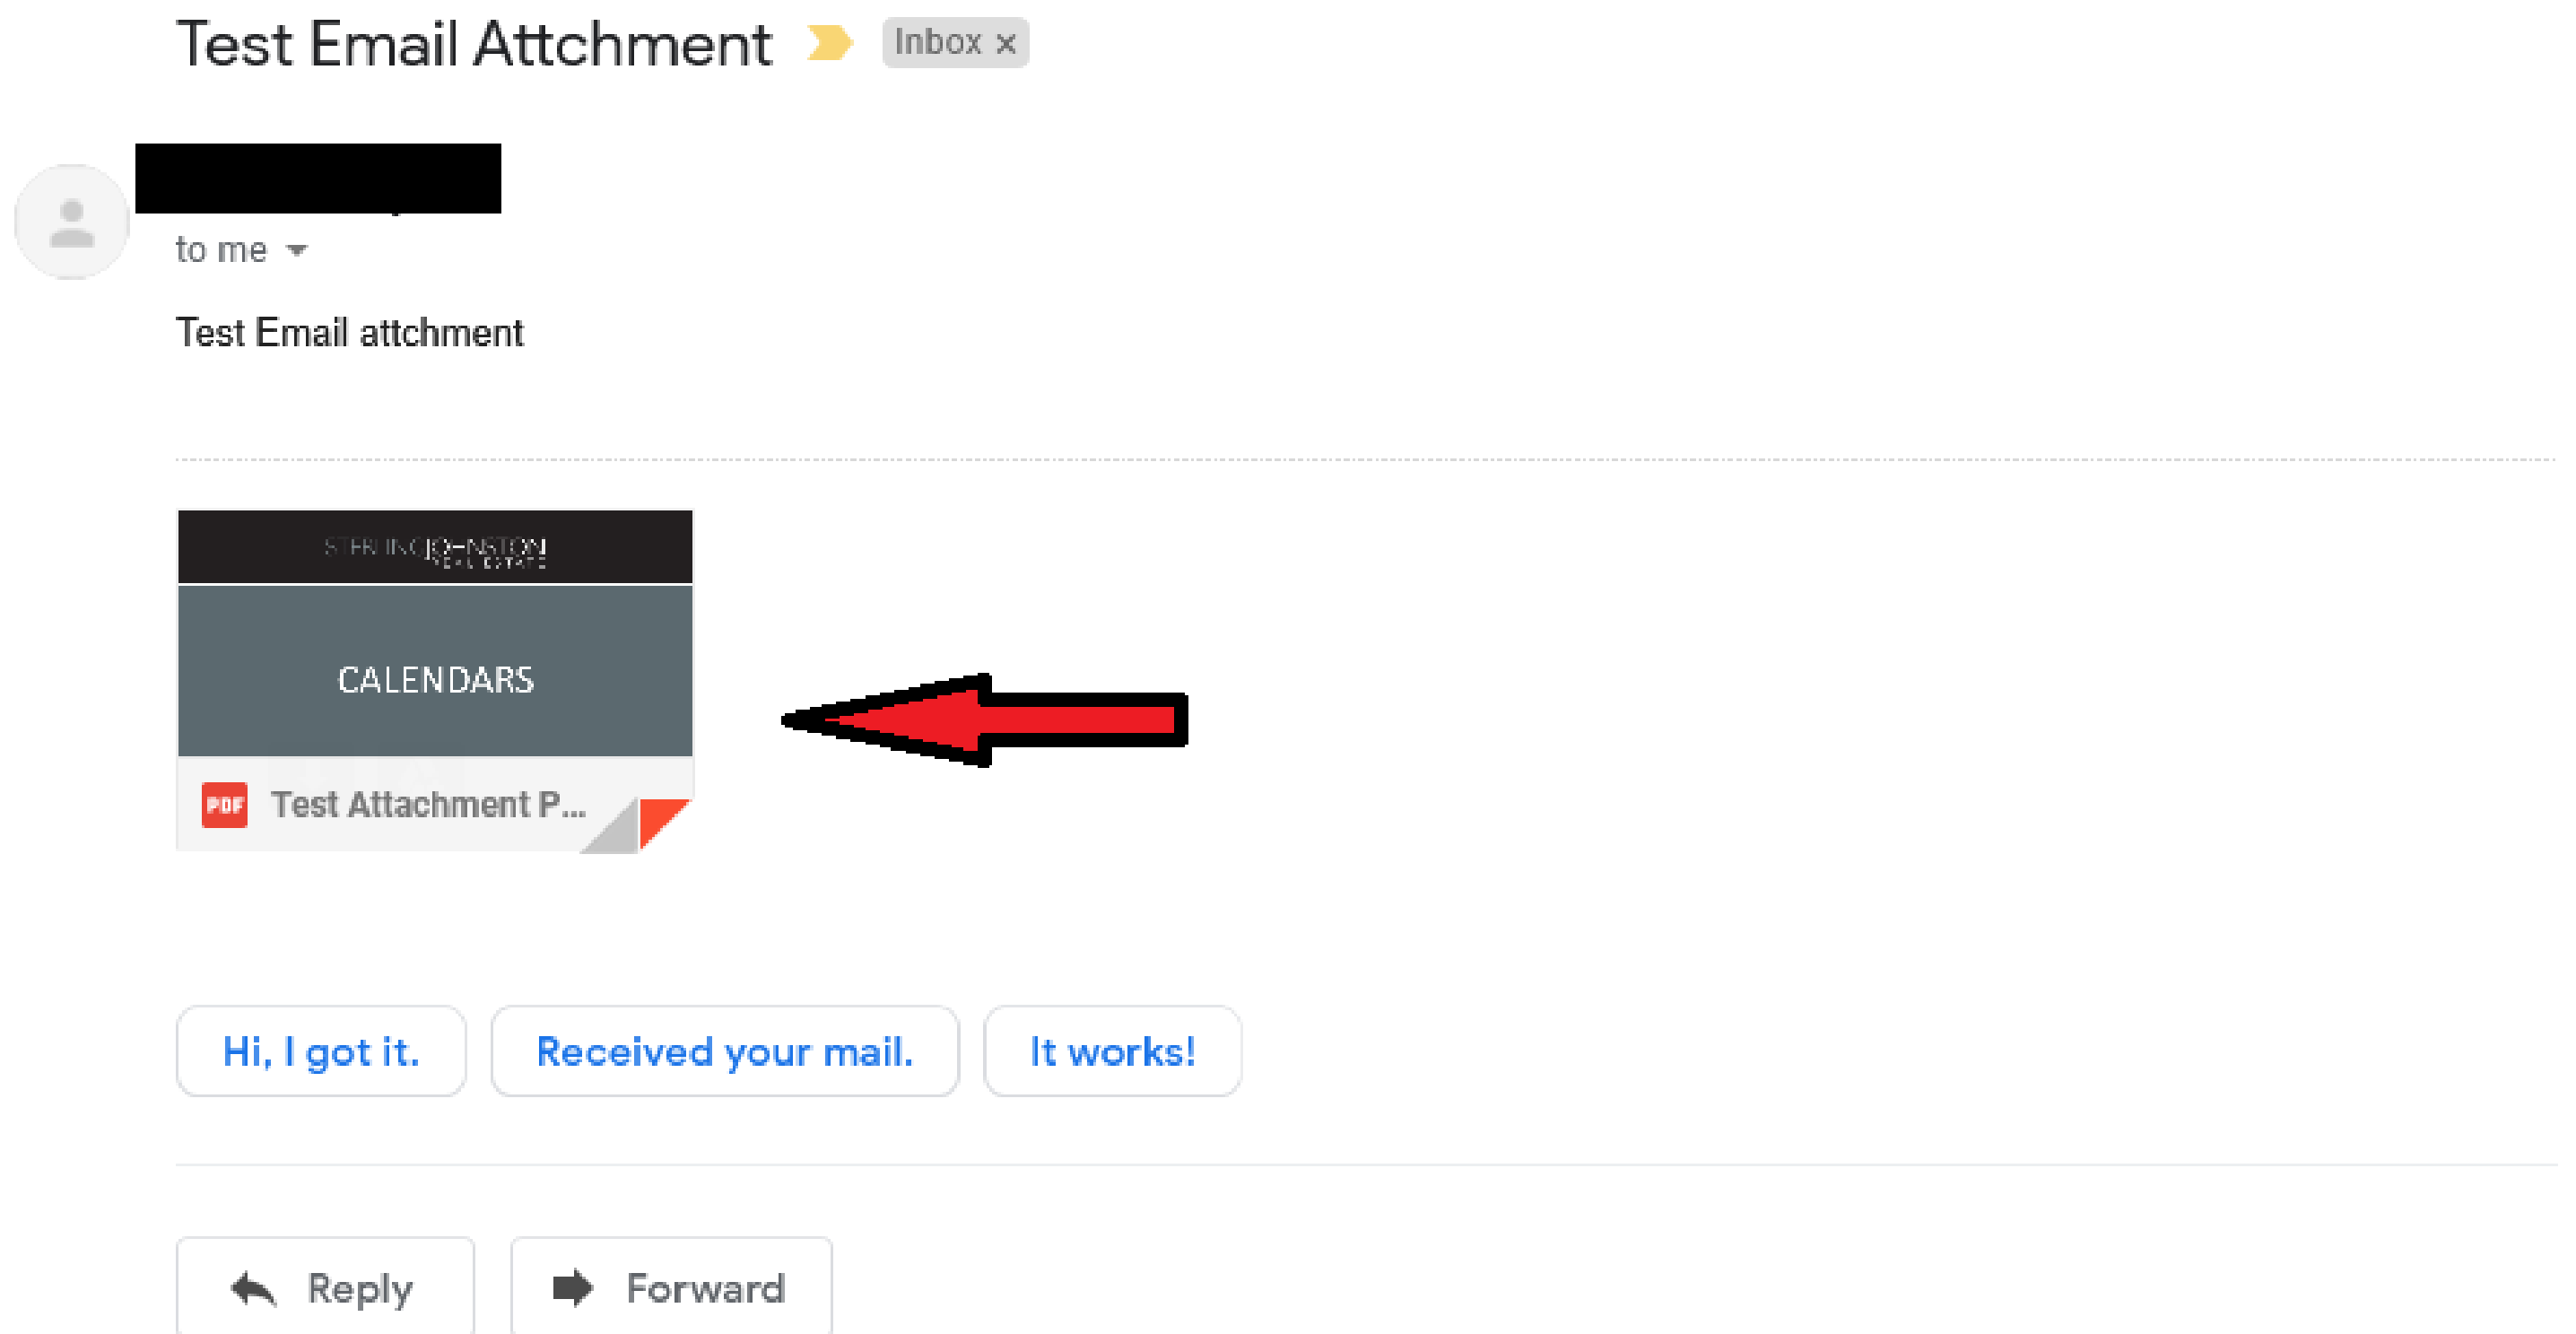

Now see how this works

Microsoft

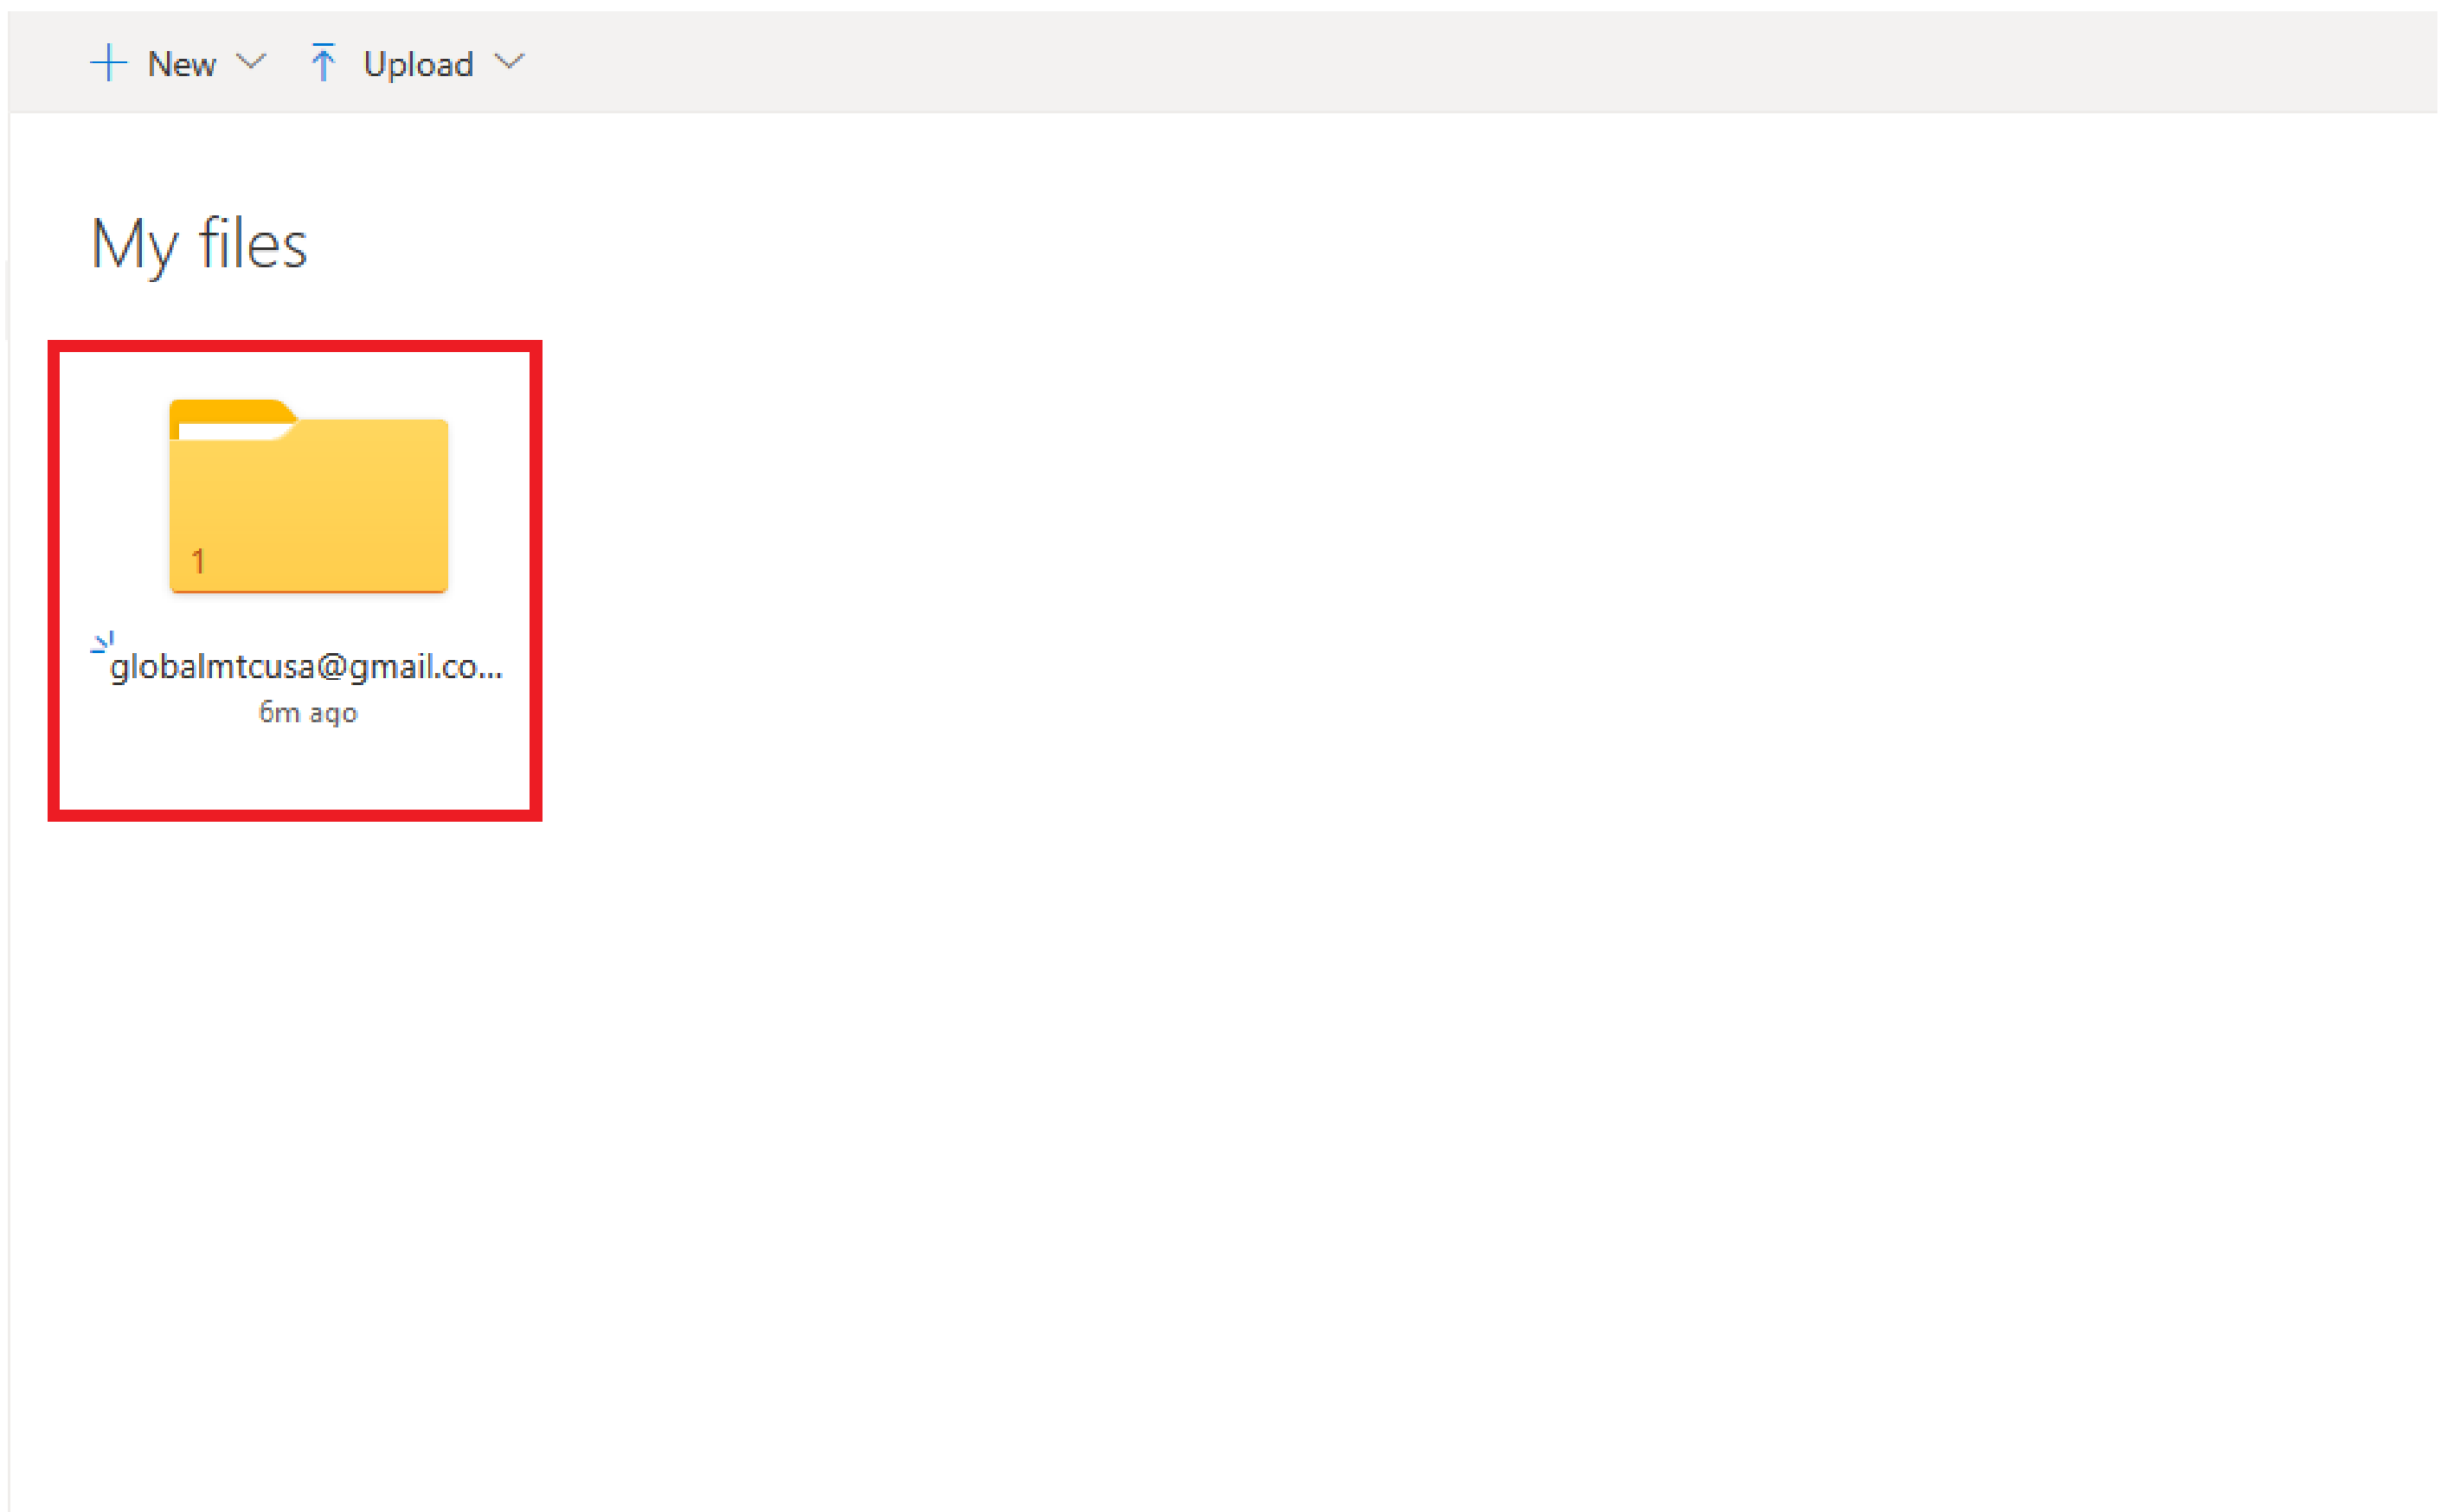

Step 1 : I received an email from a client with an attachment.

I am using Gmail account to demonstrate just how easy and smooth this app saves and organize your files. But it works will all types of emails.

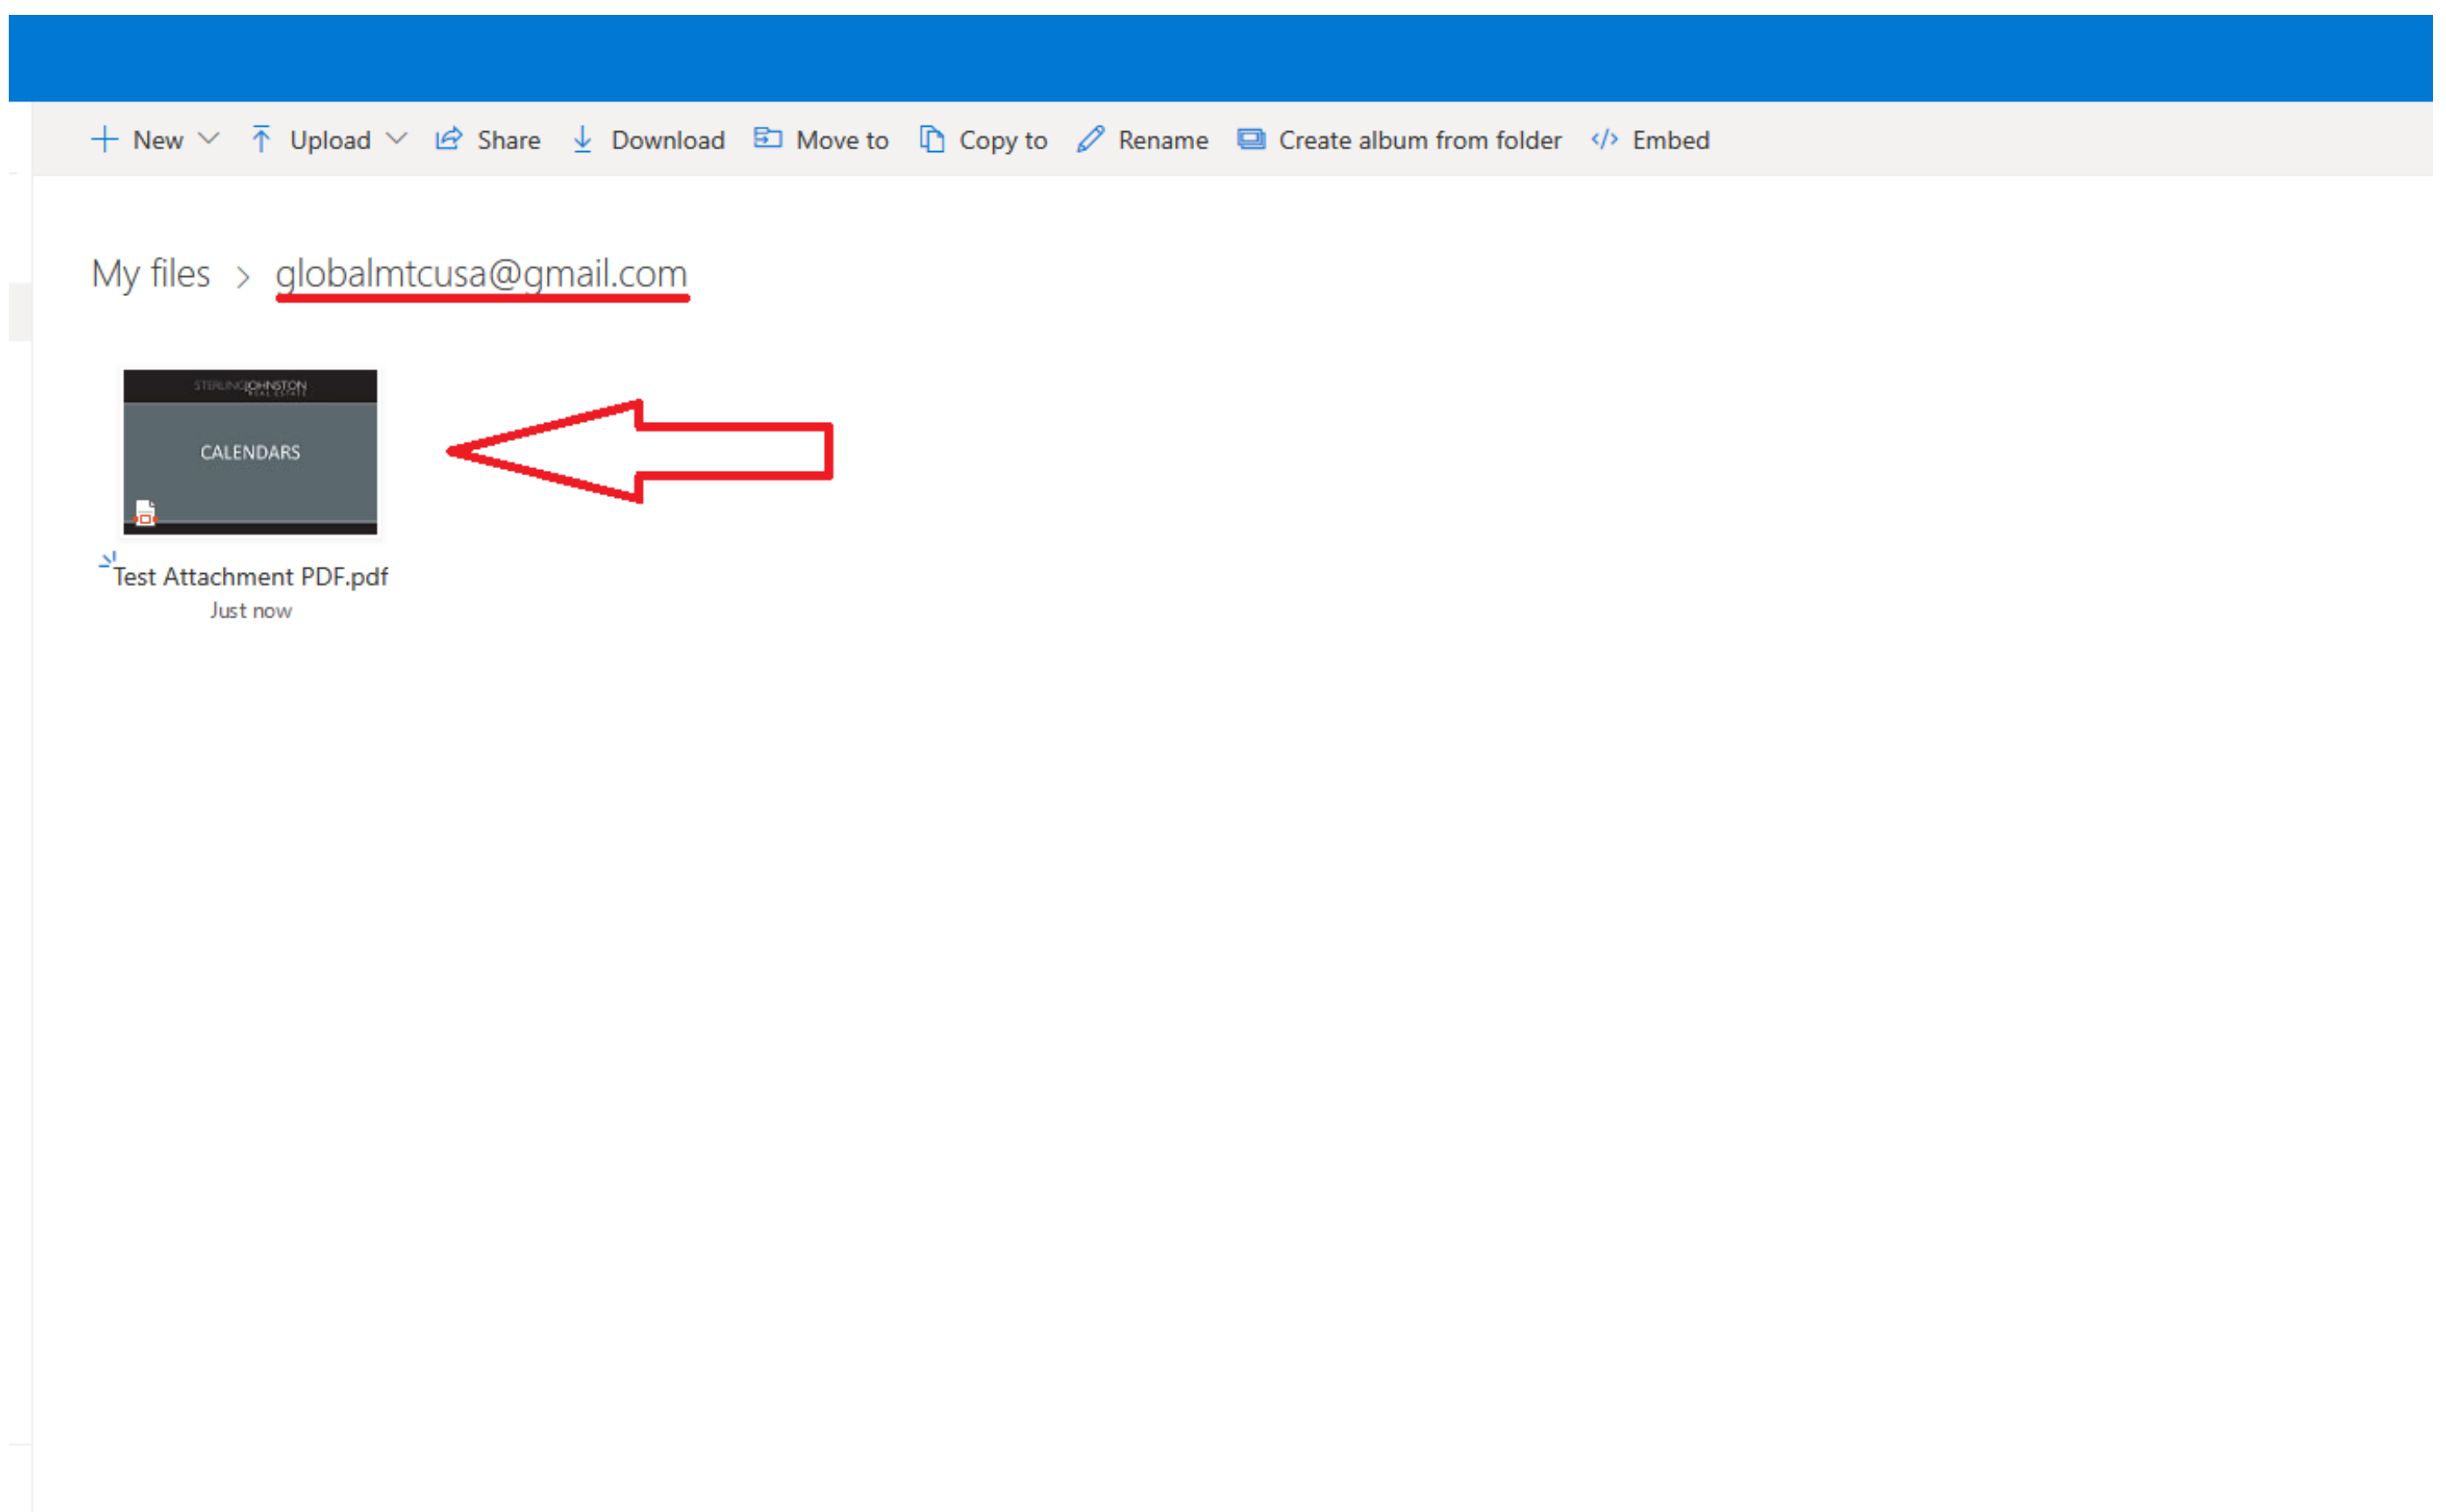

So, here you will see the email in my inbox that has an attachment. The attachment here is a PDF, but it could be a Jpg or any format. There are no restrictions.

Step 2 : Check your Online Cloud drive to see the auto saved mail attachments.

I am using my Microsoft one drive cloud to save all email attachments here. but we can setup it for all other cloud drives.

When I come to my onedrive account, I can see that a folder has been created with my client or friends email address and inside that folder I can see the saved attachment from the email I received and it has also been properly named

I did not have to do anything, all that happened is that I received an email with an attachment and Mailattach CRM did everything else automatically.

What's also cool is that anytime I received new emails attachments from this client, it will be saved in the same folder , Mailattach CRM will not create duplicate folders.

Why not give this a try. All you have to do is enter your email address here [.....] and enter your cloud drive here [.....]. And from now on any email attachments you received to your email address will be automatically saved for you in your cloud drive.

What's more. Its free
